The Spa Reborn

Manufactured in Australia, the "Uni-System" structure made up of 100% recycled plastics fits together with exact precision. Comprising 16 injection moulded upright supports, the Uni-System Cabinet can hold up to 8000 kg of weight which is almost double the amount of weight supported by a conventional timber frame.

The equipment base absorbs any vibration from the industrial grade pumps and provides

easy access to all of the spa equipment. As a part of the design, the moulded spa base has hand-holds for moving the spa, electrical "chase-ways" for electrical connection, vents to keep out unwanted rodents and pests, and an easy-access external drain. The result is a quality product that is consistent, dependable, and durable. 'Increase the life of your spa!'
