

troubleshooter

CLOUDY WATER: Check pH and Total Alkalinity and adjust if necessary. Add 1 cap of Spa Fresh Clarifier per 1000Litres of water and circulate water for 30 minutes. Some water might need to be circulated more, so keep circulating until clear.

BAD ODOUR AND CLOUDY WATER: Check pH and Total Alkalinity and adjust if necessary. Add 1 Tablespoon of Shock per 1000 Litres of water, circulate for 1 hour. Add 2 Teaspoons of Lithium per 1000 Litres of water and circulate for 1 hour - this should clear it up. If water is still not clear, keep circulating water until clear.

FOAMY WATER: Use Anti Foam, using directions on container.

IF YOU ARE EXPERIENCING PROBLEMS WITH YOUR CHEMICALS OR WATER PLEASE CALL 1800 648 959

Note: Please use this chemical maintenance as a guide only as there can be many variances. JUST SPAS and its staff offer this information as a suggestion only and accept no responsibility.

spa clear

spatips

1. Ensure your spa filtration system is turned on for at least 4 hours per day.
2. Every 3-4 months, or whenever the TDS reading reaches a level of 1,000 - 1,500 ppm replace your spa water and repeat your start up procedure.
3. Ensure the cleanliness of your spa filter cartridge is checked every week and use SPA Fresh Cartridge Filter Cleaner for maximum effectiveness.
4. Ensure chemical levels are checked weekly and the correct dosage levels are applied i.e. SPA CLEAR Lithium, SPA CLEAR Bromine Sanitizer, SPA FRESH Spa B Activate & Start Up.
5. Ensure your spa stays crystal clear by adding 30ml per 1000 litres of SPA FRESH Clarifier weekly. This will also remove any suspended particles in spa water.

easy start up procedure

Cleaning Cycle: means water is coming out of the jets and water is passing through the filter.

Jets on: means pump is on and squirting out water from various points of the Spa.

Circulate water: means water is coming out of the jets and water is passing through the filter.

Safe Chlorine range: for swimming is between 1-3 ppm as seen on your test strips.

Step 1 TEST YOUR WATER

OK RANGE for pH is between: 7.2 - 7.8

OK RANGE for Total Alkalinity is between: 80 – 160

Use your Spa Clear Test Strips to test the pH and Total Alkalinity of your Spa water (read test strip instantly). If the test reading is below the OK range for pH and Total Alkalinity add appropriate quantity of Spa Fresh pH and Alkalinity Increaser.

45 gms per 1000 litres of this product will increase total Alkalinity by 25ppm and will increase pH as well. Mix chemical, put into Spa and press the cleaning cycle, circulate for 20 minutes before going on to step 2. If the pH and Total Alkalinity is above the OK Range, add Spa Fresh Reducer to reach the OK range.

EASY WEEKLY SPA MAINTENANCE PROGRAM

One week after your initial Start Up procedure you will need to start your Weekly Spa Maintenance Program (pick a day which suits you e.g. every Saturday morning). Before you go onto step 1 hose out your filter. Every other week use Spa Fresh Filter cleaner in hot water to soak the filter cartridge before hosing.

Step 1 SHOCK YOUR SPA -for water clarity

Add 30 grams per 1000L of Spa Fresh shock to your Spa and press clean cycle on for 40 minutes (cover off). Spa Shock will help remove Chloramines and bather wastes from previous week.

Step 2 TEST THE WATER

Using your Spa Clear Test Strips test the pH and Total Alkalinity of your Spa water and adjust to the OK range.

Step 3 SANITISE THE WATER

Continue using your daily dose of Spa Clear Lithium - 2 Teaspoons per 1000L of water daily. Repeat the 3 steps above weekly until your water is 4 months old, then dump the water. Refill with new water, then proceed with the EASY START UP PROCEDURE.

Looking after your Spa water....easy start up procedure

On Delivery of your Spa, fill your new spa up with tap water to the recommended level. Fill by putting hose in filter pipe (to help eliminates air blocks) and heat to desired temperature (26-36 degrees is recommended). If you are on tank water please call the 1800 number below before you go onto the Easy Start Up Procedure.

PLEASE READ THIS SECTION BEFORE STARTING EASY INITIAL START UP

Water in your Spa can only be treated for 3-4 months. After that the water needs to be dumped and refilled with new tap water and repeat initial start up procedure (see dumping procedure).

MIXING CHEMICALS: Never add water to chemicals, always add chemical to water. The best way to add chemicals to your Spa is to get a clean bucket and fill it half way with SPA WATER, add chemicals and dissolve chemical with a stirrer. Once dissolved press cleaning cycle and pour the dissolved chemical slowly over the water squirting out of the jet.

Dosage directions are always per 1000 Litres of water 1 Teaspoon heaped = 6 gms approx 1 Tablespoon heaped = 30 gms approx

Step 2 SANITISE THE SPA

When using Spa Clear Lithium Sanitiser add 50gms per 1000 Litres and press the cleaning cycle and circulate for 20 minutes. Every day after that add 12 grams per 1000L per day as a daily dose even if you don't use the Spa. On the days you do use the spa add Lithium 20 minutes before you get into the spa. The free chlorine reading should be between 1-3 on your test strip, you are then safe to swim.

Note: This is a guide only – you may have to use more or less.

The daily dose above is based on 2 people using the spa 2-3 times per week. More usage requires more chemicals.
YOUR SPA IS NOW READY TO USE.

SEE EASY WEEKLY MAINTENANCE PROGRAM FOR OTHER TIPS TO HELP YOU CARE FOR YOUR SPA.

Chemicals are available in all Just Spas stores.

Never leave a Spa unfilled in the sun. Never leave a Spa empty for a long period of time. Always fill Spa from the filter box. Only wear clothes in the Spa that have been rinsed in water NO WASHING POWDER. Ensure that you DO NOT enter the Spa with oils and body lotions on your body.

HOW TO DUMP YOUR SPA WATER

Step 1 TAKE YOUR FILTER OUT AND LEAVE IT OUT

Step 2 USE PIPE DEGREASER

Add Spa Fresh Pipe Degreaser, 50ml per 1000 Litres, and press clean cycle for 20 minutes. Leave off for 30 minutes then back on for a further 30 minutes, the process is now finished. You can now dump your water. When the spa is empty, hose out any residue and wipe the spa out with a little Spa Fresh Pipe Degreaser on a damp rag. You can also wipe the underneath of the spa cover. Rinse off and leave in sun to dry.

Step 3 REFILL YOUR SPA WITH NEW WATER by placing hose in filter pipe (to help eliminate air blocks).

Step 4 REPLACE YOUR FILTER (after cleaning with SPA FRESH FILTER CARTRIDGE CLEANER and thoroughly rinsing).

Step 5 YOUR SPA IS NOW READY TO PROCEED WITH EASY START UP PROCEDURE.
